

600W

Cylinder Oil

Description

600W Cylinder Oil is a heavy bodied lubricating oil with compounding to augment its film forming characteristics under moderate load conditions. It is recommended for steam cylinders and for splash lubrication of selected enclosed worm gear sets operating at moderate to high speeds and temperatures.

Performance Benefits

- Good film strenght
- Excellent Lubricity
- Excellent oxidation stability

Typical Characteristics

Property	Typical Value
Viscosity, cSt @ 210°F	29.3
Viscosity, SUS @ 100°F	2100
Viscosity Index	99
API Gravity	25.5
Flash Point	560°F
Pour Point	15°F
